

How to use the app — step by step

A simple guide, from signing in to uploading your receipts. All from your phone, no tech skills needed 😊

👉 <https://ai-finance-insights.netlify.app>

 **Tip:** the app opens in **English automatically** on an English phone. If you ever see Spanish, just tap the **ES / EN** switch at the top to change it.

1 Open the app

1. Go to the link above on your phone (Safari or Chrome).
2. (Optional) Tap **Share** → **"Add to Home Screen"** and you get an icon like any other app.

2 Create your account

1. Tap **Sign up / Create account**.
2. Enter your **email** and a **password** (at least 6 characters).
3. You're in right away — no email confirmation needed.
4. **Next time:** open the same link and enter your email + password under **Sign in**.

 Your information is **private**: each person only sees their own data.

3 Get to know the screen

- At the top it greets you by name, with the **"Ask the AI"** chat.
- Below: your **Income, Spent, Saved**, your week, your wallets, the dollar rate, your pension (AFP) and a calendar.
- **To switch sections** (Overview, Analytics, Subscriptions, Budgets, Goals) use the **dropdown menu** under the greeting.
- Switch  **Light** /  **Dark**, change the **ES / EN** language, and set your **name or photo** with the round button at the top.

4 Add your transactions (3 ways)

A) Scan a Yape / Plin receipt (easiest)

1. Scroll to **"Scan Yape / Plin receipts"**.
2. Tap **"Upload receipts"** and pick the **screenshot** of your receipt from your gallery.
3. The app **reads it automatically** (amount and date). Review and **save**. You can upload several!

 *Yape and Plin are Peru's mobile-payment apps. If you don't use them, just use option B or C.*

B) Import a bank file (CSV)

1. Go to **"Import transactions"**.
2. Choose the **currency** (Soles or Dollars) and, if you like, **where it's from** (Yape, a bank, etc.).
3. Upload the **.csv** file you downloaded from your online banking.

C) Add it by hand

1. Under **"Your transactions"**, tap **"+ Add transaction"** and fill it in.

5 Categories are set automatically 📁

- When you upload or scan, the AI **categorizes them for you** (food, transport, bills...).
- Anything left as **"Other"**? Tap **"Re-categorize all"**.
- One came out wrong? Tap that transaction → change it → check **"Apply to similar transactions"** so the app **learns** for next time.

6 Track your pension (AFP) 🏦

1. On the **"AFP"** card, tap **"View →"**.
2. Add your **balance** by hand, or **scan your statement**. (Before you add anything, you'll see a sample example.)

💡 *AFP is Peru's private pension fund — handy if you have one; otherwise you can ignore this card.*

7 Convert dollars and soles \$ vs S/

Tap the **"Exchange rate"** bar, choose **Official** or **Parallel**, type an amount and use ⇌ to convert Soles ⇌ Dollars.

8 Payment reminders 🔔

Under **"Upcoming payments"**, note your regular bills (electricity, internet, rent...) with a name, amount and **day**. The app **reminds you** as they come up.

9 Ask the AI 💬

At the top, type your question (e.g. *"What did I spend most on this month?"*) or tap a **suggestion**. It answers using your own data — in English.

10 See your analytics 📊

In the section menu choose **"Analytics"** for charts of your spending and trends.

11 Sign out and back in

To leave: **"Sign out"** (top). To come back: open the link and **sign in** with your email and password — your data is still there.

⚠️ **This is a beta** — it's just getting started and may have a few rough edges. **Your feedback is what helps most**. Try it with your real spending for a few days and tell me: what did you like? what didn't work or looked off? what's missing?

Privacy: your transactions are stored securely and privately under your account. The text and images you upload are processed by AI (Claude) only to read and categorize them — **your information is not sold or used to train models**. Full notice: </privacidad.html>

Thanks for trying it out! 🚀
